

Project Modules

Activity Type

In activity type we define our entity like user, order, company, purchase etc.

Activity type code keep as a unique it will use while we set Activity Master Configuration

Activity Master

Activity master we register each and every transection [action] configuration.

Activity Templates

Activity Templates associated with activity master and language.

Activities

Activities is add as per mention instructions and it will display as per activity type, activity master, activity templates data.

Example

We have once User Register Process and we want to log activity like

User Smit Jonse has been register on 26/11/2024.

Module Value be like:

Activity Type

Activity Type: **User** [activity type title]

Activity Type Code: **user** [activity type code unique value for each row]

Status: **Active**

Activity Master

Activity Master : User Register

Activity Master Code : user_register

Status : Active / Inactive

Activity Configuration [Json value as per define structure] :

```
{"applicable_entity":[{"entity":"user","entity_key":"USER_ID"}]}
```

Notes :

Entity value register in activity type

Entity key value must be present in activity params json value.

Activity master code keep unique in table

Activity Template

Activity Master : Select value from activity master

Activity Language : Default En[English], if you want French then use [fr]

Activity template : it's value depend on you but in below mention structure

User #USER_NAME# has been register on #DATE_OF_JOIN#.[User Smit Jonse has been register on 26/11/2024.]

Notes :

Use template language as per language selection.

Need to define all template based on activity master wise.

Template and language value must be unique.

Activities

Activity For Id : applicable entity id, use while get activity for particular entity

Activity master id : mapped activity type

Activity type : select activity type

Activity prams : Jason value of template keywords as mention in templates and activity Configuration.

Activity Extra prams : save Jason what you want

Explanation:

Activity Prams values : {"USER_NAME":"Smit Jonse","USER_ID":"1","DATE_OF_JOIN":"26/11/2024"}

USER_ID => available In activity master

USER_NAME, DATE_OF_JOIN => mention in templates

Notes:

1. Keep all prams as mention in configuration.
